SEED BUYING ON IN FULL BLAST

CONDITIONS AS SEEN BY THE MANAGER, J. F. SINN

Buyers of Seeds have been hesitating the same as buyers of other commodities, awaiting lower prices. This delay has already been over-done and the tide has turned and is coming back strong to higher markets. Everyone requiring seeds are now making arrangements for same promptly. Seeds must be ordered in season so as to have them at proper planting time. You can delay buying a phonograph or an automobile without a loss, but too long a delay on seed buying means late planting and everyone knows the effects of getting in your crop too late. Nothing reduces crops faster than late planting. Only two short months until planting time so the time for action is now.

Farmers are waking up. Every mail is bringing a constantly increasing number of orders. Grass Seed buyers are in the majority and from the number and size of orders received, it is good proof to us that not only a much larger acreage is going to be seeded, but that the farmers are not skimping their seeding, using more seed on every acre sowed. It is economy of the worst kind to make a light grass seeding. Use plenty of high grade seed and the results in many cases will be double and the heavy yielding crops of hay or pasture are what you must have on this high priced land.

If any buyers of Grass Seed are delaying buying, awaiting for lower markets, it is our candid opinion they will be badly disappointed. The low prices on seed and the light seedings for the past few years have created an abnormal demand. While there was a good crop of Clover Seed, it is disappearing more rapidly than was expected and the farmers who were not compelled to sell their seed are very bullish, demanding higher prices for it than present markets will justify, and if they do not succeed in getting the prices demanded, they will carry it over until another year. History has been that one big crop does not follow another and in many sections this year where Clover was produced, the probabilities are that they will not have another seed crop in five years. Farmers who have clover know these facts and will carry the seed over. Other shrewd farmers appreciate the low prices now existing on seed and are buying two years' requirements. We urge every one needing seed to buy now and sow liberally, making up for lost time.

The low prices now existing on Grass Seed have been a sad blow to the Seedsmen. Every pound of seed carried over has proven a big loss. In face of this there came on a good, liberal crop of Clover and Sweet Clover and a fair crop of Timothy and Alfalfa. The only way the Seedsmen could possibly protect themselves from bankruptcy was to force the market to low point before the crops moved. They could not handle the new crop on a down market. They delayed buying longer than usual, the market constantly seeking lower levels. Many yet are without the usual stocks on hand, having delayed buying too long. With the unusual demand and active buying from now on, we cannot help but feel that materially higher prices will rule. We are giving our customers and friends this inside information so as to encourage them to buy promptly without further delay. If we can sell you seed now and save you money, we want to do it. We know from past experience that nothing builds up a business faster than satisfied customers.

Last year conditions were the opposite. There was a scramble for seeds in January and February. When March came, seeds were so high in price (many dealers asking \$40.00 per bushel for Clover) that the demand was curtailed and a lower market followed. Do not expect anything of this kind this year, for the early demand was light, but is now fast increasing and by March and early April there will be a scramble for seeds and every Seed House will be pushed to the limit. To insure having your seed on hand and bought at a right price, we would most heartily urge you to act today and send in your order for as much seed as you can possibly use. A bushel or two extra will be needed by your neighbors or it may prove a splendid investment to carry over. High grade Clover is never a poor asset to have on the farm. Now is the best time to secure it. Make out your order at once and send it in today. Now is the time to act.

THE LIFE OF THE CORN BELT

YOU CAN'T AFFORD TO NEGLECT THESE

RED CLOVER

If you have neglected your seeding of Red Clover during the past year or two on account of the high price of seed you should by all means make it up this year for seed is cheap. Remember that Red Clover is the foundation of successful agriculture throughout the corn belt. There are several reasons why it is essential to grow this clover. It mellows the soil allowing the roots of other plants to make a full development. It makes the ground fit for the lower forms of plant life such as bacteria, yeast and beneficial molds. You must have these to get bumper crops. It increases the water holding capacity of ordinary soils and provides better drainage for cold heavy land. It enables the ground to be worked earlier in the spring. It keeps sandy soils from blowing. It deepens the soil and breaks up heavy sub-soils. In addition to these it adds large amounts of Nitrogen, one of the most important plant foods. You positively are damaging yourself if you neglect to sow Clover liberally.

SEED IS CHEAP NOW

The prices of Red Clover seed have tumbled down with other things. We have purchased our new crop seed to good advantage and are selling the seed this year on a closer margin than ever. It has been our special aim to give our customers this year the biggest values they have ever had for the money. Conditions demand it. We want your business and we want it bad enough to cut our prices to the "quick." The standard of quality we have adopted is exceptionally high. Quality first means satisfaction in the end. Satisfaction for you. We have secured our magnificent supply of seed from the best producing sections. We have kept away from sections noted for their buckhorn and sour dock. Large purchases were made direct from the farmers. Every lot has been carefully cleaned and graded. All seed has been tested for purity and germination. Our laboratory test goes on every bag we ship. You are guaranteed absolute satisfaction on your purchase.

BUY NOW AND SAVE MONEY

In our dry fire-proof warehouse there is ready for you an abundant stock of pure, high-grade red clover seed. Beautiful seed, excellent in color; bright, shiny, clean, high germinating stock. The majority of it is World Brand Quality, the grade you will be proud to sow. It is real economy to sow such seed. Such seed always moves first. Those who come late must necessarily take what is left. Act now, while prices are low. Higher markets are bound to come as the season for seeding approaches. Get real genuine bar-

gains in Red Clover by ordering today. There is no better time.

ALSIKE CLOVER

We are confident that if all farmers understood the real value and merit of Alsike Clover, that at least 90% of them would add some Alsike Clover to every grass and clover seeding that they made. Whether you seed for hay or pasture it would pay you to sow from two to four pounds of Alsike Clover along with it. Our best farmers in this section follow this practice and it is becoming more popular each year.

VALUE OF ALSIKE

Please observe these few points we will mention briefly. They should interest you. Alsike grows somewhat lower than most clovers and grasses. It completely fills up space on the ground and in between other clovers and grasses; this materially increases the yield. When it has the support of other clovers and grasses it grows erect with them and makes the finest of hay. It is not dusty like Red Clover and is higher in feeding value. Makes an exceptionally fine mixture with Timothy, maturing at the same time. It is a perennial. Grows on nearly all soils. On land that is too wet or too sour or acid to grow Red Clover, there you will find Alsike Clover to flourish. It has driven out slough grass and transformed waste spots of this kind into acres of wealth.

Alsike is easy to grow. The seed is small. Six pounds should seed an acre. It is a wonderful seed yielder, producing 6 to 8 bushels per acre under ordinary conditions. Makes a fine clover for pastures. You can combine Alsike Clover with Red Clover, Timothy, Mammoth Clover, Red Top, Orchard Grass, Blue Grass and almost any clover or grass you want to grow. Remember this, that the use of Alsike increases the tonnage of hay per acre, increases the feeding value and helps enrich the soil. If you have trouble growing Red Clover try Alsike. We are confident it will not fail you. After you have grown Alsike a few years you should have no trouble growing Red Clover if you still think you prefer it to Alsike.

Start with Alsike Clover this year. The seed is cheap. It only takes a little seed per acre. We have a select supply of seed ready for you. See our wholesale list for money-saving prices. Get our samples or order outright. We guarantee you a satisfaction and money-saving purchase. Alsike is not so plentiful as Red Clover. The demand for it is heavier in proportion to the supply of seed. Higher prices must come. Write us today and we are confident that you will feel thankful later for the start we gave you with Alsike, the clover of sterling merit.

HOW TO CUT YOUR GRASS SEED BILLS

ECONOMY GRASS COMBINATIONS CUT YOUR COST OF SEEDING—GROW MORE HAY

Stored in our large, dry, fire-proof warehouse, we have ready for you a supply of three fine grades of Clover and Timothy combinations. They are all made of clean, high germinating seed, tested and guaranteed to satisfy you. And we have put a price on these mixtures that should enable you to save about one-fourth on your seed bill. The quality of this seed is all that you might desire. Good, plump, heavy and clean and the kind of seed it pays to sow. If you want to make your dollar do its duty in buying grass seed, don't overlook these ready mixtures. It's like getting good news from home to see these substantial values.

ALSIKE AND TIMOTHY MIXED

Alsike and Timothy is our real big popular Mixture and for mighty good reasons. This combination will invariably produce more hay per acre than either grown alone. It also makes better hay, richer hay, and is a more profitable crop. The cost of seeding is so low that nearly everyone who recognizes the value of this clover mixed hay, wants to sow it. You only need around 12 pounds of seed per acre. See our low prices on the enclosed list. Figure it out. Only costs \$1.50 per acre. In addition we give bags free. If you haven't seen a sample of this rare value send for it today. We want everybody who is going to sow grass seed this season to see it. This is a real good mixture. Contains an ample percentage of Alsike Clover. Alsike and Timothy are both perennials. Good for pasture as well as hay. Grow on the same types of soil. Mature at the same time and are easy to grow. The Alsike fills the space between the Timothy, thus accounting for the increased yields. The presence of this clover raises the protein content of the hay and it also puts nitrogen in the soil. Even if the seed cost much more it would pay you to sow it.

When you can get such a ready mixture thoroughly cleaned and ready to sow at such a low price as we are making on it at this time you certainly cannot afford to pass it up. Remember that when this seed arrives it positively must satisfy you. Examine or test it in any way you wish. If you can't see good value for every dollar you sent us we'll take the seed back and refund your money, including transportation charges. We are glad to offer it to you on this basis. You take no chances on your order. Send for some of our Alsike and Timothy mixed. Sow a liberal acreage. Cut down your seed bill and increase the quantity and quality of your hay. A delay in ordering will profit you nothing. Make out your order now and mail it. We'll do our part and guarantee you satisfaction.

RED CLOVER AND TIMOTHY

This mixture is just as big a value, just as fine a quality, just as desirable a seeding as our Alsike and Timothy mixed. It is largely a question of what kind of Clover you like the best. The Red grows better than the Alsike and for that reason some prefer it.

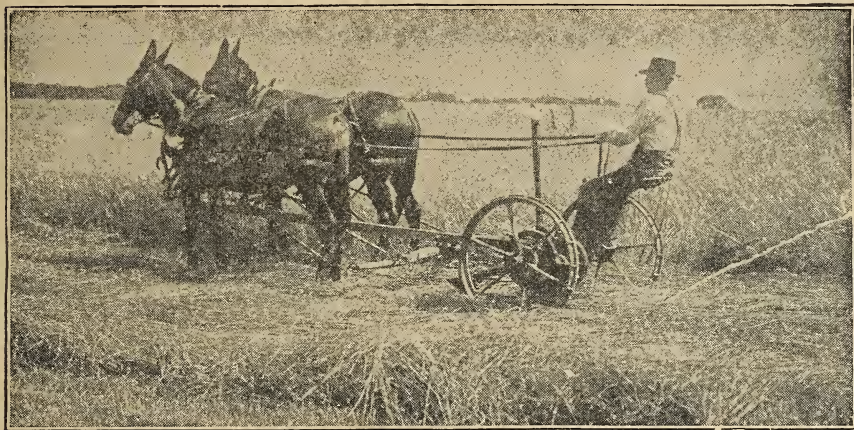

On the other hand the Alsike is finer and less dusty. Both have their points of value. It's a matter of personal choice. This Red Clover and Timothy combination is an old favorite with many customers. We receive many orders asking for this seed, this big value in Clover and Timothy like their neighbors received. There can be no stronger recommendation than this. This is a year when savings count. It doesn't pay to sacrifice quality and buy cheap seed to get a low price, but when you can pick up values like these in high-grade seed it means a genuine saving. The quality of the seed is the best we have ever had. Look at the low price on our list. Quotations include bags free. The cost of this mixture is very little more than that of pure Timothy and the yields secured so much larger that you should see at once the economy of buying this mixed seed. The Clover not only increases your yields but it also enriches your soil. Timothy sown alone is inclined to deplete the soil. This Mixture builds it up. You secure, therefore, bigger yields, richer hay and more fertile soil. The cost per acre for seed is low. The returns per acre high. If you have not sown this Clover and Grass seed in combination, do so this year. Learn of the additional profits it can bring and incidentally make a big, substantial saving on your seed bill. If you have grown this mixture and know of its value we can say to you that the value of our mixtures this year is the best ever. We guarantee to save you money if you will buy early.

CLOVER, ALSIKE AND TIMOTHY

This combination contains both Red and Alsike Clover. The two clovers together make up the same proportion of clovers as in the other two mixtures just described. It makes an admirable grass seed and personally, we are inclined to consider this the best for general purpose. We make quite a common practice of sowing Red and Alsike Clover together and can recommend this practice to all excepting when it is desired to raise the crop particularly for seed purposes.

You get a big Grass seed value in our Clover Alsike and Timothy mixture. Fine, clean seed and a bargain at the low price we have on it. Like all our other seed it is guaranteed to please. Use this mixture to help cut your seed bill to the minimum.

ROCK BOTTOM PRICES NOW ON GRASS SEED

HIGH QUALITY STANDARD GRASS SEEDS

TIMOTHY

Ninety percent of our customers sow Timothy Seed in the spring. Many sow with oats or other spring grain and some on winter wheat land. One method is to sow when the ground is checked by the frost. It is often a better method to wait until the ground can be harrowed. Then harrow immediately before and after seeding. This will not injure the wheat, especially when the wheat is drilled in and harrowing is done along with the drill rows. Such harrowing will prove positively beneficial to the wheat if the season should be dry.

Timothy has long been a standard hay crop and we predict a strong demand for Timothy hay for the next few years. It should prove to be a profitable crop for you to grow. The supply of seed we have ready for you is certainly fine. It takes some of this Iowa grown new-crop seed to bring you the results you want. Poor seed cannot produce big paying crops. We have secured a fine stock of seed. It has been carefully cleaned and is of high germination. The quality of our stock certainly gives us ample cause to be proud of it. We wish you could go through our big, dry, fire-proof warehouse and see this stock. You would be particularly well pleased with our World Brand Timothy Seed. We are sure it would please the most critical buyers. This bright plump seed is the most economical kind to sow. It brings heavy uniform stands of strong, vigorous plants. Good seed gives your grass a running start and that is what you need if you expect to get big, profitable yields.

Look at our wholesale price list, enclosed. See what low prices we are making on such seed. Prices have been cut down to the closest possible margin. We want your business and want it bad enough to make prices such as these. No extra charge for bags. We include them free. You can see a big saving at these prices. The saving may range as high as \$1.00 per bushel or better. Compare our quality with the quality of any other seed offered you. When you find an equal quality, then compare the prices. This saving is a big one because it comes on such excellent stock. The seed is guaranteed to satisfy in every particular. Your money back if you are not completely satisfied. All seed tested and guaranteed. Keep the seed 60 days if you wish to test it or have it tested. We want you satisfied and we know our new crop Iowa Grown Timothy seed at these money-saving prices will absolutely fill the bill.

The biggest saving comes to early buyers.
Send us your order today.

RED TOP

If you have any trouble getting a stand of grass; if your land is too poor or too wet or too sour to get a satisfactory stand of Grass—sow Red Top. You will find it an admirable grass for this purpose. Red Top would flourish on thousands and thousands of acres that are now either going to weeds and waste or producing light crops of other grasses. Millions of creeks are washing away valuable farms. Red Top would stop it if sown on the banks. It is easy to get a stand of Red Top and will grow in any state in the Union and on any soil excepting very dry lands. Withstands frost well. Makes an excellent pasture plant. Produces an abundance of winter grazing in the South. Its greatest value is as a pasture although it is used to a large extent for hay in combinations with other grasses and clovers. Makes a fine mixture with Alsike Clover for wet land. Timothy, Red Top and Alsike also make a good hay mixture. In some sections Italian Rye Grass and Red Top are sown together. When sown alone 8 to 10 pounds of Red Top per acre makes a good seeding. It is not necessary to prepare a special seed bed for this grass although good preparations are usually helpful. Many simply scatter it and let it grow, others disc and harrow. It is easy to start with Red Top.

Friends, we know that there are thousands who read this book who would benefit themselves by sowing Red Top this spring. If you have no regular place for it you may have your waste places, your wet spots, your creek banks. There is scarcely a farmer who could not profit from this grass. It has a definite place to fill in agriculture and it fills it admirably. Nature has provided this grass to serve you. Use it.

We have two grades of Red Top for you. Our Fancy Re-cleaned stock is bright cleaned seed. Shows good purity and germination and represents the cream of our crops. The Unhulled Red Top is good sound seed although not so bright in appearance and it contains a little more inert matter that cannot be entirely removed. Most of this is fine bits of leaves and is not anything dangerous in the way of weed seed. Both are good values and you can save money on our very low prices. Then we have a special lot of Red Top especially adapted to sowing on wet or overflow land. Fine for creek banks. We got this seed at a low figure and it sure is a bargain for the money. See page 9 for this special offer. Sow more Red Top this year.

Cheap to sow and easy to grow.

GROW NATURE'S GREATEST SOIL BUILDER

THE GREATEST OF THESE IS SWEET CLOVER

There are tens of hundreds of plants that have the power of gathering Nitrogen from the air and depositing it in the soil. The wonder work of these plants reclaims lands and enables the farmers to make more money. While all legumes work on the same plan, they do not all have equal powers. They do not all gather equal amounts of Nitrogen. Any farmer who is interested in building up his land is naturally interested in getting the crop that will do the job most quickly and thoroly. You may look the world over and you will find nowhere a crop that will equal White Blossom Sweet Clover. When it comes to soil-building legumes you will find that the greatest of all is Sweet Clover.

GROWS IN ALL CLIMATES AND SOILS

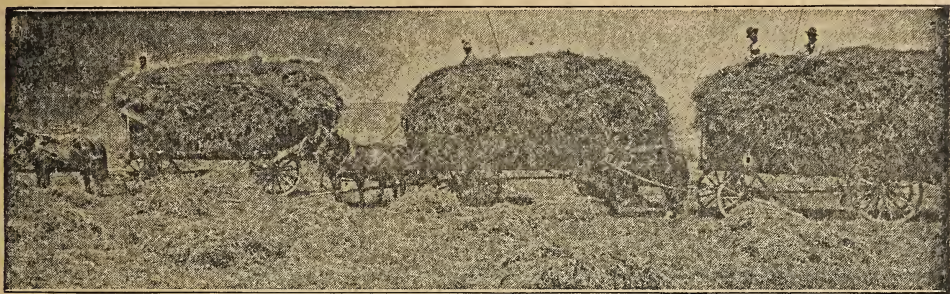

The great value of Sweet Clover as a soil builder is increased by the fact that it will grow almost everywhere. It prospers in heat and cold alike and flourishes through drought and rain. Our customers in Maine report very heavy crops and a miraculous increase in fertility. Other hay crops that they grew after Sweet Clover were so heavy that every windrow had to be raked out of the way to allow the next one to be cut. Our friends in Canada are enriching themselves through Sweet Clover and from all over the Union comes reports of multiplied profits. Throughout the east and south abandoned farms have been reclaimed and are being operated at great profit. To those who have grown Sweet Clover have come big hay crops, valuable seed yields and pastures of incomparable value. They have raised more cattle and hogs. They have multiplied their dairy profits many times. They have increased their bank accounts and actually increased the number of banks. Sweet Clover, and Sweet Clover alone, makes this possible. And after Sweet Clover comes bumper crops of corn and grain and all the while more Sweet Clover and still more Sweet Clover is being grown. Acre after acre, section after section and county after county is learning the blessings of growing Sweet Clover. Going further west we find Sweet Clover and again more Sweet Clover. In the sand hills of Nebraska and Dakota, on the plains of Kansas, in the mountains of Colorado, Utah, Montana, etc., we find evidence of the wealth Sweet Clover brings. You can find it flourishing in the Southwestern deserts and so on the Pacific Coast it grows. East, West, North and South, it matters not where you are; Sweet Clover is yours. It will serve you unceasingly and generously, bringing you big cash returns in the form of hay or seed. It will give you a pasture of great richness and one that will carry more stock per acre than any other similar crop. While you are reaping these big returns the big powerful roots of the Sweet Clover plant are growing and developing. They gather the free Nitrogen from the air and leave a tremendous amount in the soil. They equal the fertilizing value of 25 big loads of manure per acre. These roots as they grow go down to great depths bringing up plant food that other crops cannot reach. As the roots go

down they also expand, breaking up the hardest subsoils, permitting better drainage, and letting heat and moisture to depths that were hard and cold. When the crop is plowed under these mammoth roots quickly decay and mellow the soil.

USE SWEET CLOVER THIS YEAR

Friends, we urge you every one to put this powerful, money-making force to work for you this year. Nature has placed it at your disposal and you will never fully realize its wonderful value until you have grown it yourself. It is easy to grow and you can get the seed so cheaply this year. The seed is lower priced than it has been for years and lower priced we believe than it will be for years to come. The quality of the seed is exceptionally high and the cost of seeding astonishingly low. There has not been such an opportunity for years to seed to such good advantage as this year. If you have neglected your clover seedings make it up now. Sow Sweet Clover this spring. You will have a crop of hay the first year that can scarcely be distinguished from Alfalfa. The next year you will see Sweet Clover coming up about the very first thing in the spring. You will have early pasture or early hay crop and you can follow this with another hay crop or a seed crop or you can pasture it all summer. It may seem to some that the telling of the great merits and money-making power of Sweet Clover, sounds like exaggeration. You can learn that the half has not been told you if you will grow the crop yourself. We urge you to grow it for the benefit of your pocket book, the increased value of your farm, and for the welfare of the farmers in general. Start growing it in your section. Use the most powerful soil builder that Nature has placed at your disposal. Use the best seed you can buy. It will cost you less than \$2.00 per acre for seed. Insist on getting scarified seed. Sow it this spring. Sow it early. Buy it now. We guarantee to ship you seed that will show up to your entire satisfaction. Your money back if you are not satisfied with your value. Sweet Clover is a specialty with us. We handle as high as 30 carloads a year. We have high-grade seed ready for you and can save you money on your seed bill. Right now is the time to get the biggest values and the best service. See page 8 for a special offer. Act today if you possibly can. It will pay you

SEED PRICES LOWEST IN MANY YEARS

IT WILL DO THE SAME FOR YOU

A Few Practical Illustrations Proving the Notable Merits of Sweet Clover

You should be interested in learning what Sweet Clover is doing for others. The lack of space prevents us from giving detailed information, but we will set forth some facts that were secured by our customers in actual farming operations. The figures are exact and must certainly be convincing proof of the value of growing Sweet Clover. Our customers praise its yielding ability, its drought resistance, its excellence as pasture for all kinds of stock, its effect on the ground, etc.

W. H. Richardson of Atlanta, Missouri, has five sows and thirty pigs on an acre and then can't half keep it down. J. N. Souder of Brunswick, Maryland, claims Sweet Clover is the only pasture. Keeps right on the job when other Clovers and grasses fail. He runs a dairy farm and his cows produce more milk on Sweet Clover than on anything else. W. Carr of Collins, Iowa, says he has raised as good pigs as anyone with Sweet Clover pasture alone without swill or corn. E. M. Scott, of Germantown, Ohio, has been growing it for three years and states it is fine for either pasture or hay and nothing better for hogs. Geo. G. Babcock of Damariscotta, Maine, got a fair hay crop the first year from Sweet Clover and an enormous crop the second year. The third year Clover and Timothy came on this same ground so heavily that his team had a tough job to pull the mower through and each swath had to be pitched aside so he could cut the next. T. T. Dunn of Watkins, New York, states his crop the first year grew as tall as his oats. He then cut it again and his stock eat it clean. J. B. Hart of Maple City, Kansas, got a fine stand of Sweet Clover which other grasses failed on account of the drought. It made a fine hog pasture and the crop attracted a lot of attention in his neighborhood. J. D. Franklin of Kansas City, Missouri, has great faith in Sweet Clover. His horses, cattle and hogs eat it and yearn for more. V. L. Prestor of Depass, Wyoming, claims it does not cause bloat and that after his stock created an appetite for it, they left all other feed for Sweet Clover. He also praises its drought resistance. Harvey McElroy of Warsaw, Indiana, states that every seed of Sweet Clover grew on poor, sandy land and it attained a height of six feet. Fred C. Ross of Onawa, Iowa, writes that many farmers came to see his Sweet Clover pasture and are pleased to see the fat cows and the effect it has on the land. J. C. Dean of Jonesboro, Arkansas, tells of Sweet Clover still doing business, although they had no rain from May 3 to August 16. Grant King of Carson, Iowa, says his Sweet Clover made abundant pasture when other grasses burned out and so we might go on relating story after story of the value of this wonderful crop. These reports come from all over the United States and unquestionably prove its money-making features. We have paid men as high as \$150.00 per acre for seed production. Yields of four and five tons of hay per acre are frequently reported. Its worth to you can scarcely be over estimated. If we had room, we could give you many letters from men praising the high quality of the seed they have secured from us and the money they have saved in making their purchase. Right

now we have ready for you a very select stock of scarified Sweet Clover.

VARIETIES READY TO SHIP

WHITE BLOSSOM

The White Blossom Biennial is by far the most popular with our trade. As a soil builder it has no equal, as a pasture it can scarcely be excelled. It makes fine hay and big seed crops. Grows on practically all types of soils. Grows for two years and no longer. Fits into rotations admirably. Yields heavily. Is relished by all kinds of stock. Pasture them on it while young and they develop a taste for it that will cause them to leave all other feed to get the Sweet Clover. Get our samples on different grades. See price list for low figures on this high-grade stock. See page 8 of this book for a special lot of this seed. It is certainly a bargain. Send your order for it early. To day is the best time.

YELLOW BLOSSOM BIENNIAL

The popularity of this variety is rapidly increasing. Will grow to a height of four and five feet, although ordinarily not at large as the White Blossom. It makes a finer growth, however, and naturally makes finer hay. Is also excellent for pasture and makes a fine soil builder, although not quite so good as the White Blossom for this purpose. Is from ten days to two weeks earlier than the White. Equally well relished by stock and has just as high a feeding value. Every year shows a marked increase in the use of Yellow Blossom Biennial and if you expect to grow the crop especially for hay, we recommend it to you.

YELLOW BLOSSOM ANNUAL

This variety makes its complete growth in one year. It is a much smaller growing Clover and excepting in the Southwestern states, it is not as profitable to grow as the other two varieties mentioned. The seed is, of course, much cheaper and there is a considerable demand for it, due probably to the low price of the seed. We handle selected and well reclaimed seed and we are confident that you will have difficulty in securing an equal quality in this seed elsewhere.

ORDER EARLY

There can be no question but what thousands upon thousands of acres are going to be seeded to Sweet Clover this year. Farmers everywhere are going to make up for lost seeding. This is the time to do it, when prices of seed are so exceptionally low. Remember the best seed moves first. It pays to buy early. Get better seed. Better prices and better service by acting promptly. Every pound guaranteed satisfactory. You must be pleased with your values. Order today and benefit yourself.

GENUINE GUARANTEED BARGAINS THAT RECLEANED AND TESTED SEED THAT

RED CLOVER

LOT IOWA

BIG VALUE AT \$13.80 PER BU.

This is a special bargain lot of very fine quality, Iowa grown seed, and one of the best values in high grade clover that we have been able to offer for a great many years. This seed shows a high purity, good germination and is nearly equal to our World Brand, except the size of the berry is not quite as large and the color just a little duller. For seeding purposes, it undoubtedly will give the same results as the best. You can save \$2.00 to \$3.00 on every hundred pounds of seed sowed by using this lot and still have seed that should give equally as good results as our best grade. This lot was bought at a low price on account of it not being quite good enough to clean up into our World Brand. It, however, has the high purity and germination you want and is good, serviceable stock that we can recommend to our very best customers. If you want our best bargain, do not hesitate to buy lot Iowa Clover, at \$13.80 per bushel, bags free.

Make your saving on Red Clover by ordering early.

Lot Iowa \$13.80 per bu.

RED CLOVER AND TIMOTHY MIXED

LOT "BOUNTIFUL" AT \$5.85 PER BU.

This lot of Mixed Seed contains just a little more Clover than our regular grade and, if any difference, is just a little nicer seed. We consider this Mixed Seed a bargain, as it makes a cheap seeding and one that is always in demand.

We can recommend this seed to you as something that will please and give the best of satisfaction. Our customers who buy Mixed Seed are our best boosters. Every bag sold under our regular guarantee of satisfaction. Order Lot Bountiful and get our richest Clover and Timothy Mixture, \$5.85 per bushel.

The quality of this lot is bound to please you. Being a little richer in Clovers, it is all the more an attractive value. Our regular grade of this seed is a winner and a money saver and this special offer is guaranteed to please you in every way. Thoroughly recleaned and tested. High in purity and germination. Plump in berry and bright in color. Lot Bountiful is a value you cannot afford to pass by if you need grass seed this spring.

HIGH QUALITY AT A LOW PRICE. LOT BOUNTIFUL ONLY \$5.85 PER BU.

SWEET CLOVER

LOT PREMIUM \$8.70 PER BU.
WHITE BLOSSOM

In assembling a large stock of White Blossom Sweet Clover, we are always compelled to take in a few lots containing a small per cent. of Alfalfa. We buy these lots at greatly reduced prices, as they will not do for our best grade. This permits us to sell them under the market and we consider our lots of Sweet Clover containing Alfalfa real bargains, especially this year, as Alfalfa is higher in price. Again, there are many who wish a little Alfalfa in their Sweet Clover when seeded, as it helps inoculate the ground for Alfalfa later and does no harm for either pasture or hay.

Lot Premium has been carefully recleaned and is high grade seed, except it contains around 5% Alfalfa seed, not enough to be objectionable and at the same time enough to reduce the price several dollars per hundredweight.

We have put a rock bottom price on this lot as we have about 400 bags of this seed that we want to move in the next 30 days. If you want a genuine bargain, order lot Premium Sweet Clover today. Remember, it is thoroughly cleaned, testing high for purity and a very select lot of seed. Cannot help but please critical Seed Buyers.

At this low figure it will pay you to buy for spring and fall and the next spring seeding. Don't delay. This will move fast.

DON'T DELAY ORDERING. THESE LOTS W

WE HAVE BEEN ABLE TO SECURE FOR YOU

WHAT SATISFY YOU OR CAN BE RETURNED

ALFALFA

LOT MOUNTAIN

THE BEST VALUE OF THE SEASON,
AT ONLY \$13.50 PER BU.

We consider that this lot of seed represents one of the finest cars of Alfalfa Seed we have ever handled. Our catalog had already gone to press and our regular stock of Alfalfa Seed provided for before we were offered this Mountain grown seed. This seed was grown in an altitude over a mile high, has withstood the severest winters, and hot summers, and is undoubtedly as hardy as any Dakota grown seed, with the exception of the Grimm type.

The party who had this seed was badly in need of funds and insisted on us buying it. We made our own price on the seed and had it extremely low, but the party, to our surprise, accepted. This is why we have this bargain lot of seed today. It is brighter color than our World Brand, fully equal to it in purity, bigger berry, hardier seed. Our price, however, for this extremely hardy Mountain grown seed is even lower than our best World Brand. We can only accept orders for this lot until this car is gone. Another year we will try and secure a larger stock so as to offer it in our catalog. If you want the finest Alfalfa Seed you ever saw or the best quality we have ever handled, order Lot Mountain Alfalfa today.

\$13.50 per bushel until sold. Bags are free. For Extra Hardy, Extra Fine Alfalfa Seed, Get Lot Mountain.

ALSIKE AND TIMOTHY MIXED

LOT BANNER

AT A MONEY SAVING PRICE OF
ONLY \$5.40 PER BU.

Here is a real bargain in Mixed Seed. Equally as well cleaned as our regular grade and fully as much Alsike, if not more, and still at a lower price. This low price applies to this special lot as it contains a trace of Red Top. The percentage of Red Top is very small, less than 1% in many bags, but on this account we have reduced the price and are offering this lot to our customers for what it is and consider this a special bargain that will interest anyone sowing seed for either pasture or hay purposes. The amount of Red Top is so small that it really is not noticeable and for this reason we can recommend this mixture to you as being something of special value.

Guaranteed to be well recleaned, high purity and new crop of high germination. If you want any Alsike and Timothy from lot Banner, act promptly. Order today. It surely will make you a cheap seeding as well as the best. A \$1.50 worth of seed will sow an acre. Buy freely and make your seeding this year. (\$5.40 per bushel, bags free.)

Sow lot Banner liberally. It makes an excellent seeding and the cost is certainly low.

RECLEANED RED TOP

LOT "SPECIAL"

ONLY \$1.47 PER BU., OR \$10.50 PER CWT.

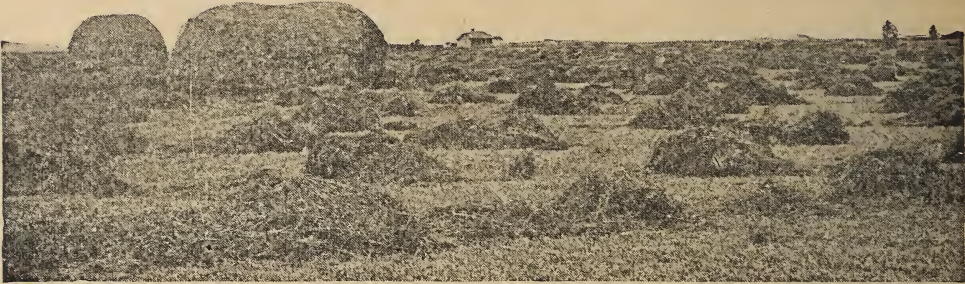

We have a surplus of Red Top removed from Timothy Seed. This seed is new crop, good germination, but contains quite a little small Timothy Seed as well as inert matter, so that it cannot be used in high grade Red Top. We have reduced the price and are offering it to our customers at such a low price that they will find it a big bargain, unusually cheap to sow and is bound to grow and give splendid satisfaction. Every bushel is well cleaned, contains no dangerous weed seed and is good, serviceable seed if you want something at a real bargain price. Remember, \$1.47 per bushel, as long as it lasts.

Sow this Grass Seed in low spots and combine it in your pasture seedings. Only takes 8 to 10 pounds per acre. \$1.00 seeds an acre. Cheapest seeding you can make. Act quick.

ORDER LOT "SPECIAL" TODAY. ONLY \$1.47 PER BU. BAGS FREE.

WILL MOVE FAST. THEY ARE PRICED LOW.

THE BEST ALFALFA VALUE OF THE SEASON

FROM MOUNTAIN HEIGHTS

Up in the high plateau of the Rocky Mountains the most severe cold weather is experienced. When springtime brings warm, growing weather to the plains, these mountain heights are still icy and clad with snow. As the summer comes, the weather moderates and the vegetation that has withstood the rigors of winter springs to life. Even then the nights are cool and often touched with frost, but days are often extremely hot. Frequently droughts are protracted and all crops that survive must have exceptional hardiness. In the early fall the first approach of winter is felt on these high altitudes. Later come the sweeping winds, the bitter cold, the blinding snow. All crops of a perennial nature are once more called upon to withstand conditions that would cause most of their kind to perish overnight. Here, if anywhere, the hardest characteristics are developed. The weak die and only the strong survive.

ALFALFA IN MOUNTAIN REGIONS

In these regions of coldest winters Alfalfa grows and flourishes and makes most profitable crops. But it is not the Alfalfa of the plains. The type of Alfalfa is the same but there is a great difference in the hardness of the seed. This mountain Alfalfa has grown for years in this country of extreme cold. Only the hardest survived and produced seed which in turn produced plants of similar hardness until today in some mountain sections there is produced Alfalfa seed of unusual vitality and hardness. This seed produces very hardy crops and in very few cases will the rest of this country have weather conditions as severe as these under which such mountain grown seed was produced. It must be plain to all that it would be excellent practice to sow such seed. It should give longer life to your Alfalfa crop, especially if you lived in a section where winter killing bothered to any great extent.

WHAT MOUNTAIN GROWN SEED LOOKS LIKE

The finest seed you ever laid eyes on is grown in these mountain sections. The seed is almost pure gold in color. Bright and shiny and plump. It is seed that shows as a rule excellent purity and high germination. Aside from its hardness it is beautiful seed and the kind you would want to sow. Add to this quality, the important factor of hardness and you have an Alfalfa seed value that can scarcely be excelled.

MOUNTAIN SEED SCARCE

Compared to the total production of Alfalfa seed the supply of this extra hardy seed is scarce. To get real, hardy, non-irrigated, Rocky Mountain seed it is necessary as a rule to pay a fancy premium but it's worth it because it will produce an extra hardy type of Alfalfa. We believe that many of our customers need just this class of seed and we have secured for you several hundred bags that represent the finest of the land. Having been bought at a low figure we can sell it at a bargain price.

GROWN A MILE ABOVE THE SEA

We have contracted for, secured and reclaimed, seed from a section subject to extremely cold weather. Grown on a wind swept plateau, on the western slope of the Rockies, withstanding temperature of 30 below zero it is seed that we are sure will satisfy you. This seed we are offering to you as a special bargain on page 9 of this Seed Facts. It is a special bargain not so much on account of the price; for we have lower priced seed; but because of the hardy characteristics you will have in your stand. When you receive your supply of Lot "Mountain" Alfalfa seed you will see seed that will please you because of its fine appearance but there will be a value there that you cannot see. Down in the heart of each germ there lie dormant certain vital characteristics. Here is extraordinary hardness imparted by a parent plant that has for years successfully combated unfavorable conditions and survived. The sturdy character of the mother plant is transmitted to the seed. The seed in turn will produce a plant similar in its nature and in its hardness to the parent plant up there in the Rocky Mountains. It is Nature's law that like will produce like and is it therefore not logical to conclude that your stand of Alfalfa will come through the winter safely? The plants that produced the seed you sowed will have to withstand a much more severe trial than your field. They have withstood it for years, and will again.

We consider this special lot of mountain grown seed "Lot Mountain" one of the biggest seed values we will have for you this year. The price is very low considering the character of the seed. The quality is guaranteed satisfactory both for purity and germination. There is only a limited lot. Place your order early. We are confident that the users of mountain grown seed will be among our most satisfied customers next year and we believe that this satisfaction will grow from year to year as the crop from this seedling continues to prove its hardness. Let us start you this year with Mountain Grown Alfalfa seed. See page 9.

THE GREATEST OF ALL FORAGE GRASSES

SUDAN GRASS

Among the most astounding crops which we had the privilege of seeing last summer, Sudan Grass stood in a class by itself. It is little wonder that this great forage crop is being so widely grown in every section that can grow corn of any kind. If you are not acquainted with this grass, we are sure that you, too, would have expressed your amazement at the growth this crop made. Then, if you would talk further with the farmers who grew it and learn what this crop did during dry spells, you would be all the more firmly convinced that it certainly was a crop worth growing.

We have seen the crop on many farms. Some were using it for pasture. These men certainly were enthusiastic about the rapid growth of the Sudan and the amount of stock it would carry per acre. That the grass was palatable and nourishing was clearly evident by the fine condition of the stock on this pasture and the way they went after it. There are many farmers who have, as a rule, sufficient pasture in the spring and fall. Their trouble comes in the middle summer when most grasses are dormant. That is just the kind of weather Sudan Grass needs. Give it good warm weather and it fairly pops along. It resists drought wonderfully well and an occasional shower, that would hardly serve to change the deadened color of other grasses, will act like magic on Sudan Grass. You can almost see it grow at such times.

Probably most of the farmers whom we visited were growing Sudan for hay. They certainly were pleased with the yields this crop produced. We heard only one complaint and that was not very serious. This farmer told us more or less in a joking way that "the blame grass grew too fast." We advised him to pasture the grass in between hay crops and he was sure that would solve his problem. One important fact to remember in connection with this is that these farms that we saw were only of average fertility and some of them inclined to be rather below the average.

The majority cut the crop for hay about the time it started to head out. They claimed that this sometimes enabled them to get an extra cutting of hay. The quality seems to be a little better if cut when in full bloom and even if it is allowed to stand longer there is no big difference in the quality of the hay. Most crops have to be cut just at a certain time regardless of how busy you are or what the weather conditions may be. This is not true of Sudan Grass.

Several methods of cutting and curing were observed. It seemed to us that the most successful was to cut with a binder. When the crop was allowed to mature for seed a corn binder was used in most cases. The best way to grow for seed is to plant in rows 18 to 36 inches apart and cultivate like drilled corn. This method will also produce just about as much hay as that which is sown broadcast for Sudan

is a wonderful stooler. The hay in such cases, however, is coarser. The opinion of most of the farmers we talked to was that the best hay and most hay was secured by sowing 15 pounds of seed per acre. Nearly everyone of these men emphasized the necessity of waiting with seeding until the ground was thoroughly warm. About 10 days after corn planting time was best, providing the season did not turn too wet or cold. A seed bed like for corn is O. K., although it is better to have it a little finer. Cover about an inch. A few men said they had sown before corn planting time and secured fine results. We do not generally recommend this for a poor start will hurt the crop for the entire year.

We wish that you could have made these trips with us and seen these Sudan fields in different stages. We know you would have made up your mind then that you would have Sudan Grass on your farm this year. You could not help but see that there was money in growing such a crop. To see these luxuriant pastures, these heavy crops of hay, these big seed yields would make anyone wish for a similar crop on his farm. It is so easy to grow and care for that everyone should have it.

The cost of seeding Sudan Grass this year is ridiculously low. See the figures on the enclosed price list. Figure it out at 15 pounds per acre. Less than \$1.50 and bags for shipping are free at that. Friends, if the seed was three or four times as much it would pay you to grow Sudan Grass. Compared with the yield and value of this wonderful crop the cost of the seed is insignificant. We hope to see the day when every single one of our customers will be growing this great forage crop. You will never be able to start to better advantage than you can this year. With the cost of the seed cut to a fraction of former values; with the quality of the seed better than usual, it is your opportunity to begin. We have secured our seed under a very attractive contract and are turning our fine stock of reclaimed seed, guaranteed free of Johnson Grass and satisfaction to you in every way, on a very close margin.

Consider the high quality that we guarantee and the bed rock price we have on it and let us save you money on your Sudan Grass seed. Sow a liberal acreage. Buy your seed now.

QUALITY INCREASES QUANTITY

WHAT ABOUT SPRING GRAINS?

The slump in grain prices last fall was discouraging to many. Because of this, many farmers may be inclined to cut down their acreage. The result will be a shortage. A shortage will mean higher prices. The farmer who has the grain to sell will profit accordingly. That is our forecast. You can't get away from the law of supply and demand. European countries who need our surplus grain will be in better position to buy next year than they were last year, unless something now unforeseen happens. That will strengthen the demand still more. We are confident that those who sow grain this spring will be the winners.

The supply of stock we have this year is exceptionally fine. Good color, plump berry, bright, clean seed. This is the kind you need to get the best crops. Let us serve you while this selected and tested stock can be secured at the present low prices.

NEW MARQUIS SPRING WHEAT

We recommend this variety to you because it has proven to be the best spring wheat for average purposes. Has won many prizes at expositions as wheat of highest quality. It stands out as a particularly fine milling wheat and as an exceptional yielder. Its productiveness makes it most profitable. You have to put a certain amount of labor on your wheat crop regardless of what kind you grow. It requires a certain number of bushels per acre to pay this cost of growing wheat. If it costs ten bushels per acre and you only get a yield of 15 bushels your profit is 5 bushels per acre. If you use an improved type of wheat of a better variety and get a yield of 30 bushels you have a profit of 20 bushels per acre or four times as much profit.

Grow your own spring wheat next to our New Marquis and you may find that the simple use of better seed has doubled your yields. This has been proven many times. Doubling your yield may mean multiplying your profits by four. The only extra cost is a little more paid for seed and that amounts to so little per acre that it can scarcely be considered. As a matter of fact you cannot afford to sow inferior seed.

Our New Marquis seed is northern grown of a hardy type. It is a heavy yielder. Matures about 10 days earlier than ordinary spring wheat thus escaping much unfavorable weather and diseases. Grows a good stiff straw. Heads are compact. Grains are very plump. We have secured this seed especially for seed wheat purposes. The stock has been thoroughly cleaned and is ready to sow. We ship in good strong bags for which no extra charge is made. The seed is guaranteed to please you.

Our New Marquis Wheat has been successfully grown in winter sections and in a good many instances used to thicken out a stand of winter wheat. Its earliness makes it adapted to these conditions.

You should find this heavy yielding selected Spring Wheat to be a money maker for you and we urge you not to delay. A prompt order will bring you the best seed and assure you of better service. Send your order promptly and be on the winning side with your wheat crop.

BERRY'S MAMMOTH SPRING RYE

This crop can be profitably grown on lands too poor or too sour to produce paying crops of other grains. This distinct variety of Rye is a boon to many farmers. If you do not find your land in good condition for oats or wheat or corn, grow Berry's Mammoth Spring Rye. Grow it for grain and its yield will surprise you. Use it for pasture and see what a large amount of grazing you can secure for your stock. Plow it under if you wish and you will improve the fertility and texture of your soil. This grain of Spring Rye is practically identical to that of Winter Rye. Has fine feeding value and is an excellent grain. Yields well on nearly all types of land. Pasture is good for all kinds of stock and especially fine for hogs.

The demand we have had during the past two years for this Mammoth Spring Rye has shown that a great many farmers recognize their need for just such a spring grain crop. This demand is increasing every year and last year our stock was sold early. Having only a limited supply this year we urge you to order just as soon as you can. We don't like to send your money back but will have to do it if your order comes after our present stock is gone. We can't get any more. The seed we have ready for you is certainly nice. You should be particularly pleased with the color and plumpness of this grain. It is all thoroughly re-cleaned and ready to sow. Our prices as you will see are very attractive. We know that on Mammoth Spring Rye of such quality, we can save you some money. Specify Berry's Mammoth Spring Rye on your order and we will ship you some fine seeding stock that we guarantee to satisfy.

QUANTITY INCREASES PROFITS

WHERE QUALITY AND VARIETY COUNT

Most men recognize that an improved type of grain or a better variety may increase their yield somewhat, but not enough of us realize the extent to which this yield may be increased. The only way to prove this is to sow two kinds side by side so that the soil and seed-bed and weather conditions will all be the same. In tests of this kind it has been proven many times over that one may double and even triple the yields of another less productive variety. It was the difference in variety alone that made the difference in yield. The proper selection of variety may mean the difference between profit and loss. Give this thought your earnest consideration.

SELECTED SEED OATS

This has been a banner year for the production of fine seed oats and we are sure that the most critical would express their satisfaction at the stock we have ready to ship. It means additional profit to sow such seed. We have selected with a special view to quality and quantity. Among the heaviest of all yielders is—

BERRY'S GREAT NORTHERN OAT

This is a big heavy white oat growing a strong straw. Produces large spreading heads and is our most remarkable yielder. This is not an oat for a man whose conditions demand that he sow a small and lighter yielding oat. If you can grow a medium late oat this variety should be an eye opener for you. Nice fat plump meaty grains. Nearly always commands premium over the market. First crop in a neighborhood is usually sold at a strong margin for seed purposes. Seed supply still limited. If you can see the advantage of getting an oat that is a winner send your order for Berry's Great Northern in at once.

OTHER HEAVY YIELDING TYPES

Our Canadian Grown Regenerated Swedish Select and New Alberta are also big oats and have proven themselves exceptional yielders. Our stock is all northern grown and thoroughly re-cleaned. We guarantee you absolute satisfaction on these. See catalog for full description. Don't be satisfied with inferior run down types. You lose money if you use poor stock. Multiply your oat profits with some real seed oats. You are the one who will benefit by using improved seed.

REMARKABLE EARLY OATS

Our Golden Rust Proof—White Kershon and Iowa 105 are leaders in our earlier types of Oats. These have always been our best and the reports from our customers last year were very enthusiastic. The yields ranged up to over 100 Bushels per acre and the quality fine. From such choice crops we have selected our seed for this season and we know you will be pleased with our seed. It is true that our improved seed will cost you a little more than ordinary oats, but they are worth more. They cost us more than ordinary oats, we have to clean them thoroughly, we include the bags in our prices and we are entitled to a small profit. It is more to your interest to sow high grade seed and it is to ours to sell it. Benefit yourself accordingly. It matters not what kind you order from us, we guarantee to ship you seed that will please you or we will take it back.

CHOICE BARLEY SEED

Barley is on the average one of the best yielding crops grown in the United States. The average yields per acre in this country during the years 1866 to 1905 were: corn, 1405 lbs.; Barley, 1115 lbs.; Oats, 814 lbs.; Wheat, 756 lbs.; Rye, 477 lbs. This certainly is taking in enough territory and time to show convincingly that Barley will produce more pounds of grain per acre than any of our common cereals with the exception of corn. Barley makes fine feed for hogs and also for cattle and sheep. Is utilized to a considerable extent for human consumption. Makes the finest of all nurse crops for clover and alfalfa seedings.

LEADING BARLEY VARIETIES

The most popular type of Barley with our trade in general is the Champion Beardless. It is a fine yielder and the absence of beards makes the straw more valuable and more pleasant to handle. It is early, grows a stiff straw and a rich grain. The demand for Champion Beardless Barley always exceeds our supply and we therefore urge early orders. We have a fine stock of this barley. Nice bright seed. This fine variety should please you and we would like to see you grow it in your section. Many write us that their field of Champion Beardless created quite a lot of talk in the neighborhood. Start it and sell the first crop for seed.

Berry's White Hull-less is a variety that has neither beards or hulls. It threshes out a kernel about like wheat but it is light amber in color. It sure is a fine looking barley, yields well and grows stiff straw. Our catalog gives full description. Not a season goes by but what we have to disappoint those who are late in ordering this variety. Be safe—order early.

Berry's Blue Hull-less is much like the White, having no hulls and threshing out like wheat but it has beards. The grain has a bluish tinge and is very heavy and plump. It yields somewhat better than the white. Both of these types are early and very drought-resistant. They are excellent for dry sections especially.

The Oderbrucker and Manshury are the best of the common six-rowed bearded types. The seed supply we have is very choice. Has been especially selected for seed purposes. Is thoroughly re-cleaned and guaranteed to satisfy you. You can certainly get big values from us in Seed Barley this year and we hope you will order while we can supply you with such fine seed stock.

HELPS ON YOUR FEED PROBLEMS

VALUABLE FORAGE CROPS FOR EARLY SEEDING

The three crops briefly described on this page are worthy of every farmer's consideration. Any one of them will bring you an abundance of feed that will help you to produce stock cheaply. They will save on your grain ration and help out on your feed problem. You could grow them all to advantage. Seed the Field Peas for early forage and hay. Sow Rape from early spring until along in the summer for hog and sheep pasture. Sow Vetch for fall hay or pasture and for the year following. All of them will improve your soil and add to your farming profits.

DWARF ESSEX RAPE

This is a pasture crop especially for hog and sheep but also good for young cattle. It contains such a high percent of protein that it will replace meat meal and tankage for hogs. It builds strong muscles and big bones. Help your young stock develop in this way and you can then put fat on cheaply. This crop cuts down on your grain ration in an amazing way and you will be surprised at how fast your stock will develop. Use Rape pasture for hogs and you will grow pork both quicker and cheaper. The quicker you can grow it the better as a rule will be the prices you can get and you will get your money earlier. It acts doubly to your profit.

Dwarf Essex Rape grows fast and can be pastured within six to eight weeks after seeding. It resists frost remarkably well and can be sown early and late. Early seeding may be made alone or with oats. If seeded with an oat crop, sow a little later than the oats so the rapid growing Rape will not interfere with your grain crop. Only six to eight pounds of seed per acre are required and the seed is cheap. The cost of seeding is insignificant.

The best results from Rape can be secured on moist and rather rich soil. Other types of land will also give satisfactory yields but it does not do well on sandy or very dry land. Yields ranging up to 80,000 pounds per acre. This figure is exceptional but 30,000 pounds or 15 tons per acre of green feed can be taken as a safe average. This analyses as high as 37% protein. Think what this means to you. Can you afford to be without a few acres of such rich rare feed? Select a few acres this year for hog pasture. Sow it broadcast or in rows about 24 to 30 inches apart. It will prove a source of great satisfaction to you when you see the amount of stock you can care for on these few acres. If practical, sow two fields so that you can pasture them alternately. If you expect to hog down corn, sow Rape in it at the last cultivation. Don't let any plots or corners on your farm go to waste. Seed them with Dwarf Essex Rape.

If you do not order from us, be sure to specify Dwarf Essex Rape when you order for there is an inferior variety that will give you poor returns. We have a fine supply of clean, new crop seed for you. It pays to use this kind and you will see from our price list that we can save you some money on Rape Seed. Every dollar saved is a dollar made. Have your Rape Seed on hand early. Order it now.

CANADA FIELD PEAS

Here is a crop that will solve your problem of early feed. If you face a shortage of early pasture

or hay and want a crop that will bring you an abundance of rich feed quickly, be sure to seed Canada Field Peas. They are strictly a crop for early seeding and will not do well in hot weather. You can seed these Peas alone or with Oats. A fine combination is 1½ bu. of Oats and 1 to 1½ bu. of Canada Field Peas per acre. This will produce a very heavy tonnage of rich feed. The Peas analyze very high in protein and is just the kind of feed you will need early in the season.

While your crop is growing the Peas are enriching your soil, as they gather heavy amounts of nitrogen. Not only is your soil richer but also mellow and in fine condition for crops to follow. After your Peas have made their growth you can raise a crop of Sudan, Millet or Buckwheat or other short season crops on the same land. Canada Field Peas have proven a "life-saver" for many a farmer and the crop can make money for you. The seed stock we have for you is new crop, high grade seed, guaranteed to please. Our prices are low. We can save you money. Let us take care of your needs. Write us today.

SAND OR HAIRY VETCH

This crop has been called "The King or Soil-builders" and it certainly has a wonderful power to reclaim worn out lands and restore them to profit-making acres. The beauty of Sand or Hairy Vetch is its ability to grow and flourish on lands where most soil builders will not grow. It has no equal on sandy soil and this gets the name of Sand Vetch. It will grow on lands too sour to grow most other legume crops and thus proves itself a friend to those who have trouble in building up their land. Its roots become literally a mass of nitrogen gathering nodules. These roots are very fine and grow out from the plant, "as thick as hair on a dog's back." It enables sandy soils to hold more water and mellows and drains cold heavy soils.

Hairy Vetch also makes a very rich feed that is high in protein. It should give a crop of hay or at least a lot of pasture feed the first fall and a magnificent crop the second season. Hairy Vetch sown in the spring acts as a biennial and produces seed the second year. If sown in the fall it is a winter annual like wheat. The crop is very hardy and comes up real early the second season. Will not grow rapidly during hot weather. Many of you who read this book, need just such a crop as this. Start it this spring. Sow it early. Order it now. Be sure to order Hairy Vetch. Spring Vetch is much cheaper but not so well adapted to most sections. See price list for bed-rock quotations.

A. A. BERRY SEED COMPANY

CLARINDA, IOWA, FEB. 15, 1921

Special Wholesale Money Saving Price List

ALL SEEDS RELIABLE—TESTED AND GUARANTEED

TO SELL THE BEST QUALITY FOR THE LEAST MONEY, IS OUR AIM

WORLD'S LARGEST MAIL ORDER SEED HOUSE

BUY SEEDS NOW AND SAVE MONEY

We consider now the most opportune time for buying, especially Grass Seed. Prices are unusually low, less than half of what they were a year ago, and undoubtedly have hit bottom and are due for higher prices. Buy before there is any decided advance and save many dollars. You can get the cream of the crop by early buying, and nine chances out of ten you will pay much higher prices at planting time.

If you will take our advice and buy now, we are confident you will save money. Many customers have written that they have taken our advice and bought their Seed early, saving anywhere from \$2.00 to \$5.00 per bushel. We need your co-operation, if you wish to buy your seed at a minimum price. We can sell Grass Seed today for less money than later, and if you want to make this saving, send in your order now.

Study our Price List, as it means money to you. Everything offered at greatly reduced prices. Our values in Seed are wonderful, the quality is extra high—better than ever before and our guarantee protects every buyer. Our prices on everything quoted includes bags for shipping, and the value of bags in many cases will pay the freight.

WHY PRICES ARE QUOTED ON PRICE LIST

SPECIAL—As it requires several months to complete a large catalog, such as we issue, it is necessary to start printing it early in the fall, before crops are fully matured or values permanently established, so we are obliged to omit prices on the larger amounts, making our lowest prices in our Price List. The prices quoted in the Price List are our correct and prevailing quotations. Use only these prices, except on smaller amounts which are quoted postpaid in the catalog. Bear in mind that the prices in the Price List do not cover postage on Field Seeds, but Garden Seeds are postpaid, except Peas, Beans, Sweet Corn, Pop Corn and Onion Sets.

Prices subject to change. Order at once and take no chance on paying higher prices. We shall issue this Red Price List from time to time, as occasion demands.

United States Food Administration License No. G32384

Wholesale Prices on Garden Seed

EVERY LOT TESTED—Guaranteed to Grow or Replaced Free of Charge

We are quoting current wholesale prices on seeds in quantities named. You can buy Garden Seeds as cheap as your dealer. These prices are extremely low, all postpaid except on Peas, Beans, Onion Sets, Sweet Corn, Roots and Plants, and include packing.

We have already mentioned the great reduction in prices we have made. Our stocks are large and we can quote Garden Seeds to the best of advantage.

Make out your order plainly, using Order Sheet and latest prices. This will save trouble and delay.

SPECIAL Please Note Prices are Post Paid in 1-2 lb 1 lb and 5 lb lots. Heavy Seeds, Such as Beans, Sweet Corn, Peas, Onion Sets, Roots and Plants are Not Post paid.

State plainly how you wish seeds sent. See Catalog. Terms, CASH with order.

CHUCK FULL OF THEM!

STOP WASTING FEED!

USE THE
"Babie" Chick Feeder

DESCRIPTION. The "Babie" Chick Feeder is made from Galvanized Steel materials through out, making it substantial and rustproof. Should last a lifetime. Size 6 inches high, 24 inches long and 18 inches wide, accommodating THIRTY to FORTY chicks at one feeding.

SAVES THE FEED. Only the smaller chicks can enter the feeder as the door has a patent guard which prevents older fowls from entering and eating the chick feed. The feed **SAVED** on ONE BROOD will pay for at least ONE Feeder.

SAVES THE CHICKS. Drop the feed through the top of the Feeder and watch the little fellows hustle inside and eat in contentment, while the older fowls have to stand outside and look on. Prevents the chicks from being trampled and killed by the grown chickens.

IDEAL ATTACHMENT FOR COOPS. The "Babie" Chick Feeder is an Ideal Attachment for any brood coop as it is so made that the door of the feeder will meet the opening in any coop, permitting the chicks to be fed away from the old hen, thus saving feed and preventing the hen from tramping and scratching them at feeding time. Water can also be placed in the Feeder for both hen and chicks, where it can not be upset.

A GOOD INVESTMENT. The "Babie" Chick Feeder meets a long felt need among poultry raisers. It must be used to be fully appreciated, and once used no poultryman will feed chicks in the old wasteful way. It's a good investment, will last a Life Time, Saves the Chicks, Saves the Feed, and Makes Poultry Profits **SURE**. Order yours today so you will have them when you need them.

FIFTY ACRES in a ten-hour day—seeded evenly, thoroughly and easily. That's what you can do with a Cyclone Seeder. Use it with any seeds that can be sown broadcast or with ground bone, ashes or fertilizers—a Cyclone will pay for itself in three hours work! Because its absolutely even distribution will make three bushels do the work of four.

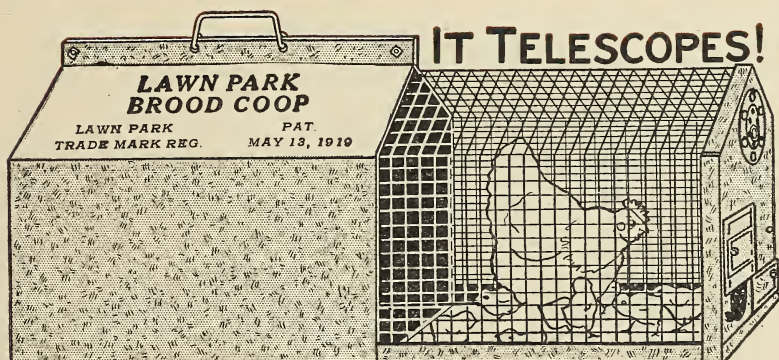

The Parts that do the Business

1. **SLOPE FEED BOARD**—A very important feature, found only in the Cyclone. Keeps the hopper properly filled without tilting the machine. Insures a uniform flow and affords a great convenience to the operator in carrying the Seeder.
2. **AUTOMATIC FEED ADJUSTMENT**—Gives positive Force Feed throughout. Quickly adjusted for different seeds. Flow can be started or stopped instantly by a touch of a lever. Can't clog or "rush." No waste of seed.
3. **DISTRIBUTING WHEEL**—Scatters seed evenly. Throws equal amounts to equal distances on each side of operator. Made of solid tin—with no soldered joints.

Low Priced—But Guaranteed Absolutely.

USE THE

LAWN PARK COOP

The wire park pulls out like a bureau drawer and is made from heavy galvanized hardware cloth.

The main coop is made from strong 28 gauge galvanized iron. Size of coop: Park extended, 18 inches wide, 19½ inches high and 48 inches long. When park is closed, coop is 24 inches long.

It Gives The Chicks Sunshine, Fresh Air, Grass and Protection From All Enemies

1. **This is a Parking Coop** made so as to telescope (see cut). It gives double the ranging space when park is fully extended.
2. **The "Lawn Park" Coop** gives the chicks the natural condition they need for healthy vigorous growth, namely, sunshine, fresh air and grass.
3. **It Absolutely Protects** from rats, cats, dogs, hawks and all other enemies. Also protects from dampness and vermin. It is sanitary and easily cleaned.
4. **It Gives Proper Ventilation.** In hot weather it is as cool as any place out doors. If weather is cold or stormy or too damp, simply push the park in and the brood and hen are securely sheltered.
5. **It serves as a Feeder** for each brood. This is the proper way to feed as they are all of one size and have an equal chance.
6. **The "Lawn Park" Coop** makes an ideal place for setting a hen. Here, with park extended, she may have small range and access to food and water and not be disturbed.
7. **It Makes an Excellent Place** to break up the broody hen.

WHY OUR BUSINESS GROWS SO RAPIDLY

SEEDS AS REPRESENTED

Lynch, Nebr., Oct. 15, 1920.

Dear Sir—I have bought many bushels of seed from your house due to the fact that your prices are reasonable and have found your seed to be all that you say it is. Yours,
F. T. SCHRUNK.

MAMMOTH RED CLOVER 6½ FT. LONG

Cleveland, Ohio, 10-19-1920.

Dear Sirs—Two years ago this fall I ordered some Mammoth Clover from you and this year I cut clover off of an old persimmon field that measured six and one-half feet. Gave a sample to our County Demonstrator. My Clover field was a thing of beauty and the talk of the neighborhood. Yours,
H. J. ROBINSON.

TREATED HIM "RIGHT"

Dear Sirs—Will say have bought seed from A. A. Berry Seed Co., for a number of years. I have saved money. Got the very best stand of grasses in the neighborhood. Your Company have sure treated me right. Yours,
FRANK WILLITS.

HONEST WEIGHTS

Anamosa, Iowa, 4-5-1920.

Dear Sirs—Seed received a day or so after I wrote you—order No. 46436. Much pleased with quality of seed and honest weights. Yours,
LEO H. COURTNEY.

QUALITY SEEDS CUT EXPENSES

Columbia, Mo., 11-24-1920.

Dear Sirs—Enclosed find order for Clover and Alfalfa, also check for \$94.80 to cover. My order is small this year as last year your seed was fine and the year was favorable so the farm is so full of Clover and Alfalfa that there is no room to plant other crops. Yours,
VAUGHAN HICKMAN.

EIGHT FOOT SWEET CLOVER

Cripple Creek, Colo., 11-28-1920.

Dear Sirs—The Sweet Clover seed you sent grew 8 ft. tall. Please enter order for 30 lbs. scarified White Clover Seed. Yours,
CEDAR CRES FRUIT FARMS CO.

EXTRA RESULTS FROM QUALITY SEEDS

St. Paul, Ark., 7-21-1920.

Dear Sirs—The seed that I bought of you last spring turned out extra good. The best I bought in years. I am in need of more seeds. Send your latest catalog and price list. Yours,
C. A. SAILER.

BEST STAND EVER

Weldon, Iowa, January 29, 1920.

Dear Sirs—I got one bushel of you last year that was fine and I got the best stand I ever got. Enclosed find check for same. Yours,
F. V. HULL.

QUALITY PLEASES

New Albany, Ind., April 13, 1920.

Dear Sirs—The seed we got from you was the best lot of seeds I have had for a long time. Yours,
J. H. CAUMMISAR.

SEEDS PROVE UP FINE

Gillet, Pa., Dec. 20, 1920.

Dear Sir—As I am interested in grass seeds I would like quotations on your seeds, having used your seeds and they are proving what you claimed for them. I am writing for prices again. Yours,
RAYMOND M. BURNHAM.

WINS PRIZE WITH BERRY'S SEED

Verdon, Nebr., Oct. 27, 1920.

Dear Sirs—I am writing you to let you know of my good luck. I bought one bushel of Clarinda's Perfection Seed Corn. I planted it and I took twelve ears to our County Fair and got first prize of 48

entries. I received \$25.00 in prizes. My corn is just fine. I have 125 acres out this year, it is just fine, but the Perfection beats them all. It will make 75 bu. per acre and it is all Seed Corn. They had an expert here at the Fair from Lincoln and he said that these twelve ears were better than any at the State Fair. Yours,
FRANCIS E. SMITH.

OUR SEED INCREASES LAND VALUES

Sandstone, Minn., Sept. 25, 1920.

Dear Sir—Your seed always improves the land in the right way. Just give the seed a chance and the land will do the rest as before I used the seed it was about \$20.00 less on the acre and now it is worth \$50.00 an acre of \$4.00. Yours,
D. R. BOBB.

IN A CLASS BY THEMSELVES

So. Otselic, N. Y., Sept. 11, 1920.

Dear Sirs—Your seeds are in a class by themselves and I cannot praise them enough. Yours,
PERCY PEARSON.

BETTER STANDS FROM BERRY'S SEEDS

Amity, Missouri, Sept. 23, 1920.

Dear Sirs—The Clover seed I ordered last spring from you was fine. I never got a better stand before. Yours,
ERNEST F. STEINER.

WE SAVED HIM TROUBLE

Roosevelt, Minnesota, 9-24-1920.

Dear Sirs—I want to thank you for your promptness and for the fine seed. From this on you shall have my orders. I have been having so much trouble with another company. Yours,
FRANK E. BOYLE.

YOU TELL 'EM

Detroit, Mich., 8-7-1920.

Dear Sirs—You can tell the world about your Bonanza Mixture as the seed I got from you a year back gave the man I sold the farm to three tons per acre and only \$8.00 per bushel. Used 7 qts. per acre. Yours,
C. D. MATHIE.

BUYS CHEAPER FROM BERRY'S

Logan, Ohio, Sept. 24, 1920.

Dear Sirs—I have been talking with Mr. Henry Nutter and he says he has been getting seed of you cheaper than he can get it here. Yours,
AMOS DICKEN.

SAVED MONEY

Morris, Ill., Oct. 13, 1920.

Dear Sirs—I am very much satisfied with the seed and service I got from you. The seed did prove O. K. and I consider that I saved money. I have recommended your seed to my friends and neighbors. Yours,
HARRY S. HOGE.

BEATS ANY EVER BOUGHT

Booneville, N. Y., 11-24-1920.

Dear Sirs—The seed that I received of you last spring was the best I ever had. Yours,
JOHN S. ZAGURSKI.

BEST EVER PLANTED

Wauhatchia, Okla., Jan. 15, 1920.

Dear Sirs—I have found your seed give the best results of any seed I have ever planted yet. Please send me at once. Yours,
S. J. SANDERS.

FINEST CROP EVER GROWN

Pilgrim, Ky., June 7, 1920.

Dear Sirs—As I have just returned out of my field this morning, I wish to let you know something about my grass and clover I ordered from you this spring. I have got the finest crop I ever saw grow and my Barley is fine—fixing to head and Oats can't be beat. I will order some more seed next spring. Yours,
J. D. HARMAN.

AN ALFALFA TYPE GROWING IN POPULARITY

GRIMM ALFALFA

When you consider the purchase of any seed, your main idea should be to determine the final result you will secure from the crop. Now, when you are buying Alfalfa Seed, there are other factors to be considered besides the purity and germination of the seed. The average man wants a stand of Alfalfa to last for a number of years. Therefore, hardiness is an important factor to consider. There is a great deal of difference between one lot of Alfalfa and another. For instance: you can take two types of common Alfalfa. One is grown in a section having cold winters and dry summers. It has little protection in winter and no irrigation in summer. Such plants develop great hardiness and these qualities are transmitted through the seed to crops grown from this seed. Other seed is grown in milder sections. The winters are less severe and the plants get ample rainfall or irrigation in the summer. These plants are of a weaker type and will not withstand unfavorable conditions. That is the reason why our Nebraska, Dakota and Montana grown dry land non-irrigated seed is worth more money than seed of weaker types.

There is, however, a great difference in varieties. The Grimm Alfalfa has certain characteristics that make it more resistant to winter killing than even the hardest strains of the common kind. The Grimm has a branching root system instead of one straight tap root. The advantage of this is easily seen. In many sections the ground heaves up in the spring through the action of the frost. This heaving pulls the plants up with the soil. This has a tendency to break the roots. If there is only one root and that root breaks near the surface, then the plant dies. If there are many roots, like in the Grimm, it does not make so much difference if one or two break. There are still enough to feed the plant and maintain an excellent stand. Then, further, the crown of the Grimm type is somewhat lower and that renders it less liable to damage.

Now, seed of the Grimm type Alfalfa is considerably higher in price than the common type. In sections that are not bothered with winter killing to a great extent we really do not believe that it pays to sow the Grimm; a hardy strain of the common will do fully as well. On the other hand, if you live in a section where you have much damage from winter killing, we believe it would pay you to sow the Grimm even if you had to pay twice as much as we are asking for our seed.

Now, all Grimm Alfalfa is not equally hardy. The conditions under which the seed was grown have an influence on the hardiness of the Grimm just as much as they influence the common type. It will pay you, therefore, to insist on northern grown stock.

We have ready for you a fine supply of Dakota grown Grimm Alfalfa. This seed we have purchased with care so as to have the assurance that it was the real Grimm seed. The purity and germination must also be high, and we are certainly proud of the seed we have this year. It has a fine color, a plump berry, high germination, excellent purity and extraordinary hardiness. It is seed that we are glad to sell subject to your approval. Send your order for it early. When the seed comes, test it or have it tested. Keep it sixty days, if necessary to convince yourself that you have big value for your money. We'll take it back if you are not satisfied.

See our price list for wholesale quotations. Here is a price that will enable you to make a substantial saving on your seed bill. You cannot buy equal quality to better advantage, and in most cases these prices mean a saving of \$4.00 to \$5.00 per bushel. Remember, our prices include bags free. Grimm Alfalfa of this quality is not plentiful. After our present supply is gone, we can offer no more at these low figures. Please order at once. It is to your interest to do so. Any order will be appreciated and will receive our prompt and careful attention.
